Inspector

Bluefairy Inspector
Manage, In Real-Time, Events & Alarms

Bluefairy™ Inspector is built specifically for the real-time management of events and alarms.

Bluefairy™ Inspector handles, both automatically generated and sensor-driven, events and alarms triggered by badge-wearing personnel and tagged assets. Bluefairy™ Inspector offers a clutter-free interface, allowing users to focus specifically on the events and alarms generated by personnel and assets. Incidents are displayed in real-time, minimizing response delay and allowing situations to be dealt with as soon as possible.

Any events or alarms are displayed on-screen, in real-time, to minimize response time

Any violation of user-defined business rules will immediately appear in Bluefairy™ Inspector, notifying manager or safety and security teams so they can act promptly.

Bluefairy™ Inspector provides an automatic notification dispatching tool. As soon as an event or alarm occurs, the appropriate people can be instantly notified by e-mail, SMS, telephone or directly through the system network.
